INTRODUCTION

Kara, my four-year-old granddaughter repairs Grandma's iPhone.

[video: <https://youtu.be/Vmy1sFDEqN8>]

Step 1 — Rear Panel

- Here you can see the original cracked rear panel and the replacement panel.
- Next using a Phillips head screwdriver, remove the mounting screws at the bottom of the iPhone. Place them aside carefully as they are really small.
- Finally, once the screws are out gently apply pressure and slide the screen up to release the panel. Careful not to be too rough with it.

Step 2

- Carefully place the replacement panel on to the iPhone back lining it up as close to the bottom as possible.
- Now again gently apply pressure as you slide the panel towards the bottom of the iPhone to lock it into place.
- Replace the screws that you set aside earlier and be sure no to over tighten otherwise you will strip them.

Step 3 — Kara repairs Grandma's iPhone

- So simple even a four-year-old can fix it!

To reassemble your device, follow these instructions in reverse order.
